

RED AND WHITE WHEAT

For the 2023/24 harvest and beyond, XLD will segregate wheat into red and white varieties. The market is currently paying a premium for white wheat, as the demand for locally grown wheat outstrips supply. White wheat is preferred by some consumers and is often supplied “ex mainland”.

By segregating local wheat, XLD believes we can reduce the reliance on mainland imports and grow the local area planted to wheat.

Wheat will still need to meet GTA specs for SFW to qualify. Normal discounts for out-of-spec grain will apply.

As with our current pricing system, daily prices for white wheat will be sent via WhatsApp, for spot and three years forward.

Please note, existing wheat contracts will be honoured to the specification at time of agreement.
